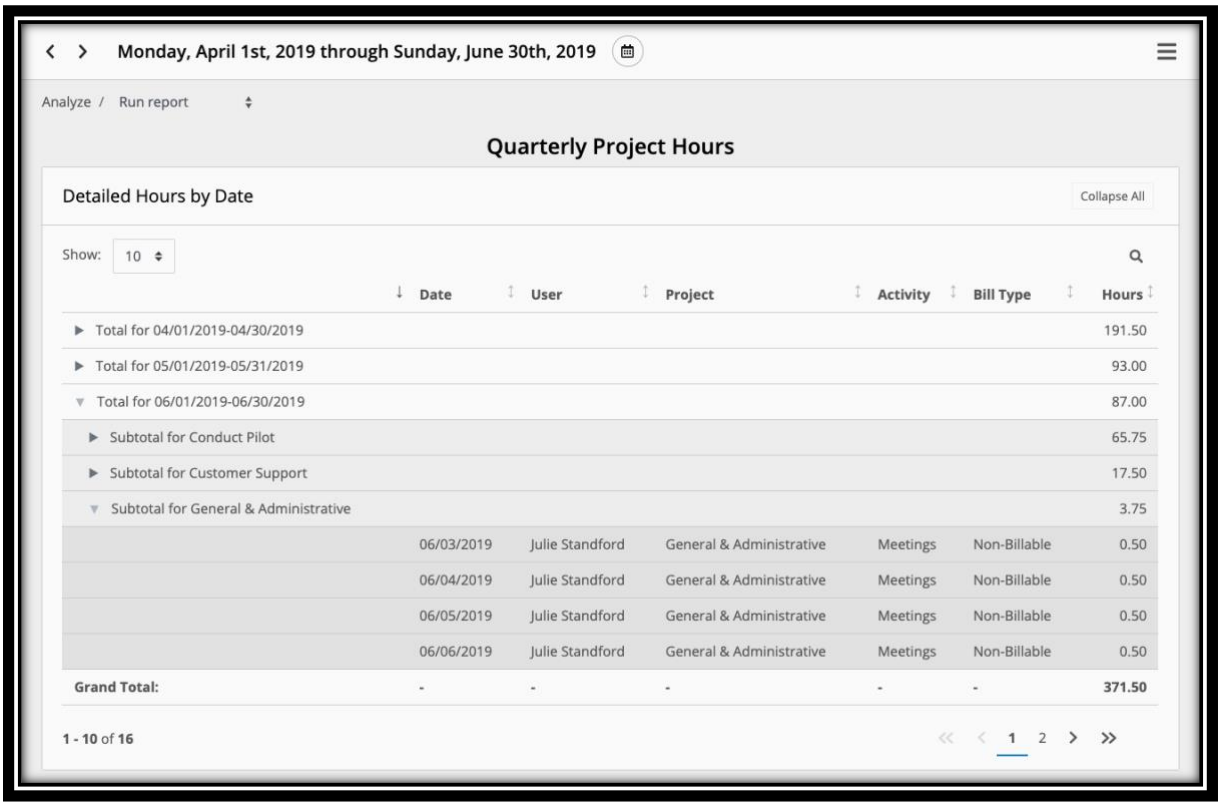
# What's New With Journyx

Release: Endeavor (v12.1)
Date: November, 2019

Journyx gives you the tools you need to collect employee time quickly and accurately for projects, billing, and payroll. The latest release of Journyx's core product makes project time and expense tracking even easier and reporting more powerful.

**Here is what's new in Journyx:**

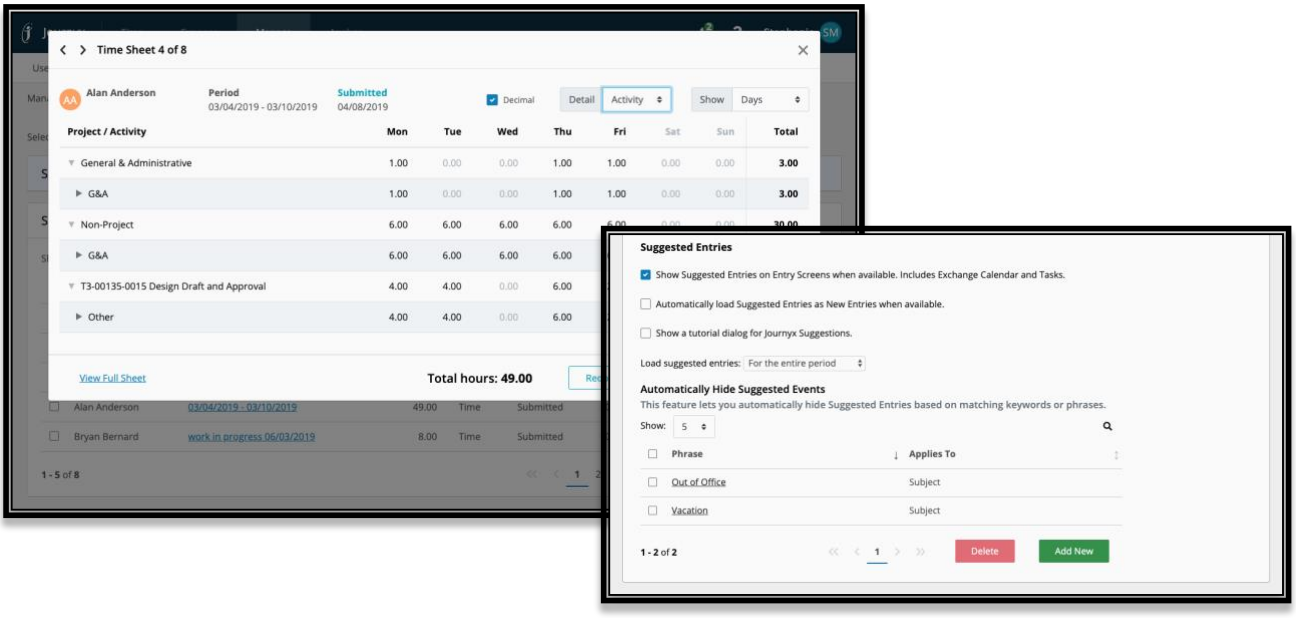
**Focus on Reporting User Experience, Flexibility and Security**



**Cleaner, more modern report output, combined with run-time options and secure 3rd party connectivity, makes Journyx reporting more powerful than ever.**

- New and improved web format for standard reports with pagination, drill down, search, etc.
- Filter a report in different ways without changing the report's saved settings
- API key authentication security including read-only keys and key expiration for connecting to 3rd party BI platforms

## Smarter Timesheet Autofill and Approval Efficiency



**More accurate data for suggestions gets users one step closer to a timesheet that fills itself out. With better data and tools to view it, managers can breeze through the review and approval process and get on with their days.**

- User-selected, keyword-based rules for automatically ignoring specific types of suggested time entries (e.g., vacation, personal appointments)
- New, more secure API key authentication for connection to third-party sources of timesheet suggestions
- Additional viewing options for manager approvals, including time format selection, drill down and remembering your settings
- New notifications engine for managing notifications to employees from inside of Journyx

### Miscellaneous Features

- Set single versus multiple assignment methods at the project-task level in Journyx PX
- Create new role abilities for generating and using API keys
- Easily remember your last filters and settings with new card-based screens

**NOTE:** *Beginning with this release, Journyx no longer supports the Internet Explorer browser. Microsoft no longer updates Internet Explorer. Journyx is supported on modern versions of Edge, Chrome, Safari and Firefox.*

## Time & Expense Tracking in the Cloud for a Global Workforce

Your employees are working 24x7 from many different locations – so when different teams are entering their time and expenses in several different systems, it's a disaster waiting to happen.

With Journyx's cloud-based solution, all of your employees' time (including project and leave time) and expenses are entered into one system – making timesheet collection and processing quicker and easier.

### What You'll Get with a Journyx Cloud Installation

- **Reduced IT Burden** – Removing support of Journyx from your staff's workload allows them to focus on more important things, like running your business.
- **Immediate Action** – With your permission, Journyx can quickly resolve any issues without waiting around for a site backup to be sent to our support team.
- **Upgrades** – All software upgrades - minor and major - are included at no additional cost.
- **Ease of setup** – You get all the Journyx functionality without having to install it.
- **Space** – You don't have to worry about which machine has enough free disk space or rotating your backups. We have more than enough room for all your sensitive data in our fully encrypted, highly redundant block storage.
- **Horsepower** – You'll have enough bandwidth to handle every last one of your users – whether you need it at 5PM on Friday or the end of a pay period.
- **Security** – Network and server security is a headache to manage, especially if your Journyx server has access to your critical business applications. We take care of that for you with our security-first cloud architecture.
- **Pain-free backups** – Your data is important. That's why we securely back it up nightly both in the AWS cloud and an access-controlled off-site location. There's no need for you to provision and manage your own backups.
- **Built-to-last** – Our SaaS infrastructure is deployed and managed in Amazon's world-class AWS Cloud by AWS-certified SMEs with dozens of cloud deployments under their belts.
