

What's New with Journeyx

PRODUCT RELEASE: GREENWICH (12.2.0)

DATE: MAY 2020

Journeyx provides the tools you need to collect employee time quickly and accurately for projects, billing, and payroll. The latest release of the Journeyx platform makes **project time and expense planning even easier** and makes **reporting more powerful**.

Team Assignments

The new team assignments feature for Journeyx PX allows you to block off the future availability of a team without requiring you to identify the specific team member(s) who will do the work when the time comes. PX customers can create as many teams as needed, and the system will show you aggregated resource availability metrics based on the members of each team.

With team assignments for PX, you can:

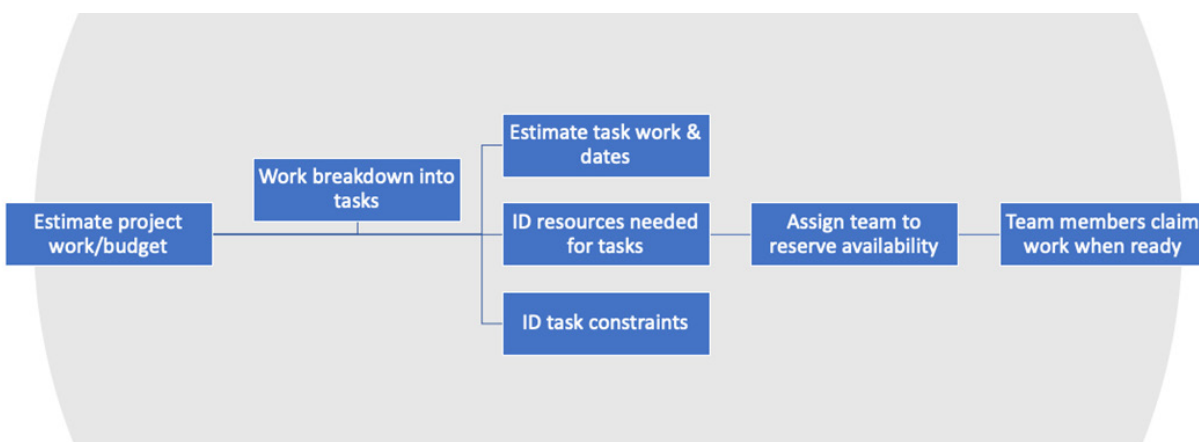

- Create teams based on skills, locations or custom information
- Block teams for future tasks before individual resources are named
- Review future team capacity in relation to individual assignments
- Allow members to “grab” assignments for themselves when ready

How do team assignments help you?

When planning project work into the future, you can block off time for types of resources without knowing exactly who will be doing the work. You can then see future resource capacity based on teams of resources and avoid overbooking and/or plan to add to staff to ensure you have the resources to do the work.

POWERFUL NEW FEATURES & UPDATES

- Block off future availability of a team before identifying individual member(s) who will complete the work
- Measure future team capacity in relation to individual team member assignments
- Allow team members to “grab” available work assignments
- More options to customize reports on project schedules and budgets
- Improved notification performance and responsiveness of the Journeyx system interface

What's New with Journyx

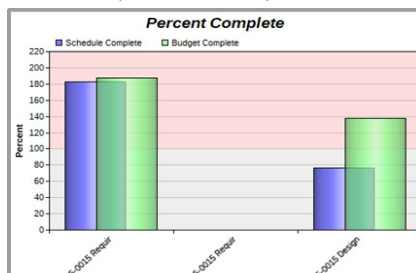

PRODUCT RELEASE: GREENWICH (12.2.0)

DATE: MAY 2020

Native Reporting Improvements

Journyx now has more options to customize reporting, including a grid layout option for viewing report data by sheet and a new chart type for comparing numbers or stacking multiple numbers.

BEFORE: (fixed choices)

AFTER: (you choose data)

How do reporting options help you?

More options for organizing and viewing your data in native reports allows you to see and preserve your data the way you need it. Whether you need to see time data in sheet format for auditing or you need to quickly compare work actuals to estimates for a group of projects, new layout and chart options put actionable business intelligence at your fingertips.

Other Miscellaneous Updates

The new release includes significant performance improvements for notifications. The new release also provides the option to block manual approval plans when Org Chart Manager is in use.

How does this help you?

Performance improvements increase the responsiveness of your Journyx system, and the ability to lock down manual approval plans ensures that administrators cannot inadvertently overwrite Org Chart Manager settings.

UPGRADE TODAY

Isn't it time your company made the move to the newest release of Journyx? Contact your account manager to learn more about this latest release and how you can upgrade!
