

What's New in Journyx 13.0

1st Half 2023 (2023H1)

Journyx is consistently on a quest to improve and upgrade our products and customer experiences, with two major releases each year. Journyx JX/PX version 13.0 provides infrastructure upgrades to improve performance and load times, along with updates to reporting, data management, and a much-requested update for additional fields for ERP integration.

Updates in Journyx JX and PX

- Major **infrastructure upgrades**, delivering enhanced security and performance: 40% faster page loading speeds and 25% faster search times, along with improved times for imports and integrations
- More **robust audit reporting and historical data management**
 - Option to report on who created/modified data and when
 - Date-based archive/purge, plus ability to purge old users, projects, sheets, and attachments
 - Upgrade-in-place option to increase upgrade speed for major releases
- Support for tracking **more business data** as part of your ERP integration
 - Ability to track and sync more than four fields for time, expense, and equipment data
- **Multiple workflow support** for automatic sheet processing* and approvals
 - Set up different workflows for various groups and scenarios (auto-population and submission for users who can't do it themselves, auto-approval for timesheets not approved in a given timeframe, etc.)
 - Workflow timing: preview only, one-time or recurring

**Automatic sheet processing can be added to your license for an annual fee*
