

What's New in Journyx JX v14.1.0

2nd Half 2026 (2026H2)

Journyx continues to improve and update our products with **two** major releases each year. This upcoming release introduces platform improvements and new capabilities designed to make time entry faster, simplify system updates, and better support organizations with distributed teams.

Journyx JX (project time tracking) product updates

Highlights of this release:

- **Architecture Updates, Smart Timesheets & OAuth Capabilities**
 - Updated Python version for faster and more secure delivery of new features
 - Smart timesheet suggestions from Microsoft Exchange calendars and tasks updated to be faster, more accurate
 - OAuth 2.1 adds token-based API access, permission controls, and support for future MCP server connectivity
- **Crew Entry Improvements**
 - Improved load times make it faster to access and manage crew timesheets
 - New quick search helps administrators find users more easily
 - Expanded filtering options include support for custom fields and larger search results
- **In/Out Times for Memorized Sheets & Schedules**
 - Option to capture scheduled start and end times alongside hours
 - Supports individual and group memorized sheets with compatible time entry screens
- **Project Hierarchy Display Options**
 - Display up to four project hierarchy levels in separate columns on entry screens and list reports
 - Available for time, expense, and custom entries and reports
 - Customize column names to match your project structure
- **Journyx Mobile App Improvements**
 - Weekly and biweekly periods now follow each user's assigned start day
 - Sheet status indicators identify open, submitted, and approved timesheets
 - Tap attached image thumbnails to enlarge them for easier viewing
