JOURNYX SCOUT: AI-POWERED ANALYSIS FOR YOUR CLIENTS' TIME TRACKING DATA

Use natural language to get questions answered

Do you sell to busy executives or managers who want essential information to analyze their time data easily, without having to ask someone in their organizations to create or modify reports? Then, Journyx Scout is the answer (and has the answers)!

Talk to a Journyx sales exec about Scout today!

Journyx Scout uses Journyx data, Journyx-developed code, and the Microsoft version of ChatGPT-4 behind the scenes to offer state-of-the-art, generative artificial intelligence (AI) to help your clients get answers on their time data efficiently.

- **Data request examples:**
  - *Show me all currently active projects*
  - *Which project manager is managing the most projects?*
  - *What were the most profitable projects in the 1st half of 2023?*
  - *Where are my highest expenses for all projects?*
  - *Which business unit generated the most revenue last month?*
- **Complex, calculated data reporting** such as hourly cost/revenue by project AND by resource
- **Export to Excel** for additional analysis, chart/graph creation, etc.

> what are the 5 most profitable projects that have been completed?
>
> To provide the information you're looking for, I need to clarify how you define profitability. Are you referring to profitability as the difference between revenue and costs, or as the ratio of revenue versus costs?
>
> Difference, please
>
> . . . The report shows the top 5 most profitable projects that have been completed. Each project is listed with its name, description, and profit, which is calculated as the difference between the budgeted revenue and the total cost (budgeted hours multiplied by the pay rate of the project manager). The projects are ordered from the most profitable to the less profitable ones.
